

DEL-AIR Systems Ltd. has been a manufacturer of ventilation and environmental control systems, as well as rotationally molded plastic products for nearly two decades. The introduction of DEL-AIR's Custom Plastics Division has led to the development of some unique products for the livestock industry. Ventilation accessories and even sewer line fittings have been custom-engineered to meet our customers' stringent requirements.

- Single space wet/dry feeders available in single and double (back-to-back) models for both grower and finisher operations.
- Sow crate feed
- Pit plugs
- Sewer line Saddle T's
- Transpoker™ weaning transport containers
- Verminator™ rodent bait stations

Complete engineering facilities to assist in the development of custom designed parts to meet your needs.

DEL-AIR's Custom Plastics Division is an active member of the Prairie Implement Manufacturers Association (PIMA) and the Association of Rotational Molders (ARM).

Whatever the need, rotationally molded plastic parts will stand the test of time.

"DEL-AIR Systems has rotationally molded quality parts for Westland Rec-Creation for 10 years. We have always been more than happy with the quality, durability, and service we have received. If you are looking for a supplier of durable plastic parts, we highly recommend DEL-AIR Systems."

Blain Fredrick, General Manager
Westland Rec-Creation Inc.

"When transporting weanling hogs from your farrowing barn to the nursery facility, it's important to keep the animals warm, dry and together in litters. This will promote a stress-free environment and ensure maximum growth. The Transpoker™ from DEL-AIR Systems satisfied all the requirements for my 2400 sow facility."

Florian Possberg, CEO
Big Sky Pork Farms
